Ennovar...Partnering with Industry on Cyber Security

Cyber security focuses on protecting computers, networks, programs, and data from unintended or unauthorized access, change, or destruction. And Ennovar technology institute – located on the campus of Wichita State University – focuses on creating innovative ways to partner with industry experts to combat these cyber attacks.

Ennovar believes in alternative ways to do things, providing a different way of delivering products and at a cost point that may be more attractive than other options. By working with Ennovar and our valued partners, our customers are able to offload and outsource projects and work that frees up valuable internal resources.

By utilizing students in the cyber security curriculum, Ennovar is able to co-op students who are familiar with networking, firewalls, and other cyber attack points and place them in real world environments conducting Level 1 support for businesses across the country. Located in a secure area at Ennovar, this team of cyber cowboys monitors the SOC main channel for security events and closing or escalating these events as necessary.
